SULIT

SECTION A : 50 MARKS**BAHAGIAN A : 50 MARKAH****INSTRUCTION:**

This section consists of TWO (2) essay questions. Answer ALL questions.

ARAHAN:

Bahagian ini mengandungi DUA (2) soalan eseai. Jawab SEMUA soalan.

QUESTION 1**SOALAN 1**

CLO1
C1

- (a) State THREE (3) sky condition of daylight.

Nyatakan TIGA (3) keadaan langit cahaya siang.

[3 marks]

[3 markah]

CLO1
C2

- (b) Describe with the aid of a diagram daylight factors components.

Jelaskan dengan bantuan gambarajah kompenan faktor cahaya siang.

[7 marks]

[7 markah]

CLO2
C3

- (c) Figure QA1 shows a horizontal window inside a room with the floor area of 6.3 m². The reflection factor of the wall and the floor are 60% and 10% respectively. The room is situated at a clean industrial area involving clean industrial work. By assuming that the Externally Reflection Component for the room is 0.31%, calculate the minimum daylight factor at point Q.

(Refer related table in Appendix A1, Appendix 2 and Appendix A3)

Rajah QA1 menunjukkan sebuah tingkap di dalam bilik yang berkeluasan lantai 6.3 m^2 . Faktor pantulan bagi dinding dan lantai adalah masing-masing 60 % dan 10 %. Bilik ini terletak di kawasan industri bersih yang melibatkan kerja-kerja industri bersih. Dengan mengandaikan bahawa Komponen Pantulan Luaran untuk bilik adalah 0.31 %, kirakan faktor cahaya siang minimum pada titik Q.

(Rujuk Jadual berkaitan di Lampiran A1, Lampiran A2 dan Lampiran A3)

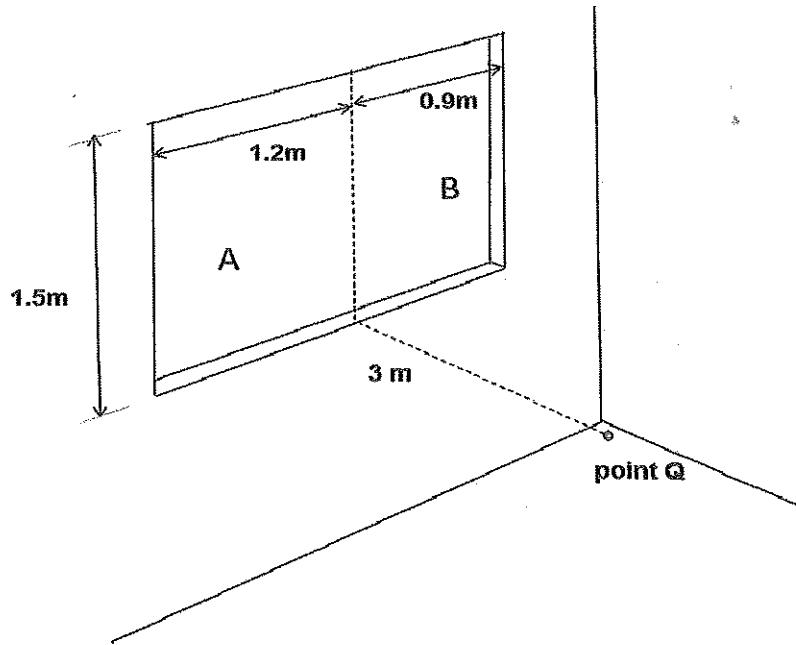

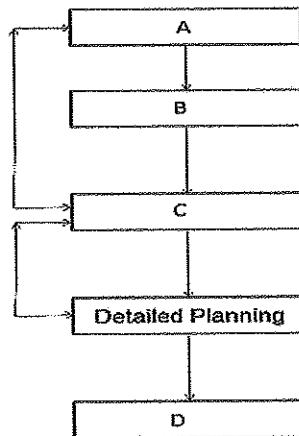

Figure QA1
Rajah QA1

[15 marks]

[15 markah]

QUESTION 2**SOALAN 2**CLO1
C3

- (a) Complete the flowchart that shows the processes of lighting design.

Lengkapkan carta alir yang menunjukkan proses-proses rekabentuk pencahayaan.

[4 marks]

[4 markah]

CLO3
C4

- (b) Interpret the meaning of parameters used in Lumen method calculation below:

Tafsirkan maksud parameter yang digunakan dalam pengiraan kaedah Lumen di bawah:

- i. Utilisation factor

Faktor penggunaan

[3 marks]

[3 markah]

- ii. Maintenance factor

Faktor penyelenggaraan

[3 marks]

[3 markah]

CLO3
C5

- (c) A newly built locker room will be equipped with regular array of Plastic Trough Louvered luminaires which may provide a standard illuminance of 150 lux. The locker room dimensions are 10 m x 6 m x 4 m (height). The interior surface reflections are 50% for ceiling and 50% for wall. (Refer Appendix A3)

Sebuah bilik persalinan akan dilengkapi dengan luminaire jenis Plastic Trough Louvered dengan keterangan khidmat piawai 150 lux. Bilik tersebut berukuran 10 m x 6 m x 4 m (tinggi). Faktor pemantulan permukaan bilik adalah 50% untuk siling dan 50% untuk dinding. (Rujuk Lampiran A3)

Additional data:

Data Tambahan:

Lamp Specifications <i>Spesifikasi Lamp</i>	1 X 25 W lamp (F25T8/TL850 ALTO 30PK)
Luminous Flux <i>Fluk Lar</i>	2,100 Lumens
Work Surface Height <i>Ketinggian Satah Kerja</i>	0.75 m
Spacing to Height Ratio <i>Nisbah Jarak Terhadap Ketinggian</i>	1: 1.25
Maintenance Factor <i>Faktor Penyelenggaraan</i>	0.79

- i. Estimate the number of luminaire by using the Lumen method.

Anggarkan bilangan luminaire dengan menggunakan kaedah Lumen.

[10 marks]

[10 markah]

- ii. Show the layout of luminaire in Q2c(i).

Tunjukkan susunatur luminaire di Q2c(i).

[5 marks]

[5 markah]

SECTION B : 50 MARKS***BAHAGIAN B : 50 MARKAH*****INSTRUCTION:**

This section consists of FOUR (4) essay questions. Answer TWO (2) questions only.

ARAHAN:

Bahagian ini mengandungi EMPAT (4) soalan eseai. Jawab DUA (2) soalan sahaja.

QUESTION 1***SOALAN 1***CLO1
C2

- (a) Describe the term Luminous Flux.

Jelaskan istilah Fuk Lar.

[3 marks]

[3 markah]

CLO1
C2

- (b) Explain the factors that influence the quality of light as stated below:

Terangkan faktor-faktor yang mempengaruhi kualiti cahaya seperti yang dinyatakan di bawah:

- i. Colour

Warna

[4 marks]

[4 markah]

- ii. Glare

Silau

[3 marks]

[3 markah]

CLO2
C3

- (c) An LED lamp with a luminous intensity of 2850 cd is located 3.3 m on the ceiling (measured from the work surface) as shown in Figure QB1. The table is situated 1.6 m away from the light source and the radius of the table is 0.3 m.

Sebuah lampu LED menghasilkan keamatan lar sebanyak 2850 cd. Ianya terletak 3.3 m di permukaan siling (diukur dari permukaan kerja tersebut) seperti yang ditunjuk pada Rajah QB1. Meja terletak pada jarak 1.6 m dari sumber cahaya dan jejari meja adalah 0.3 m.

- i. Calculate the maximum and minimum illuminance on the table

Kira pencahayaan maksima dan minima diatas meja tersebut.

[13 marks]

[13 markah]

- ii. Relate an illumination law used in QB1c(ii).

Kaitkan hukum pencahayaan yang digunakan di QB1c(ii).

[2 marks]

[2 markah]

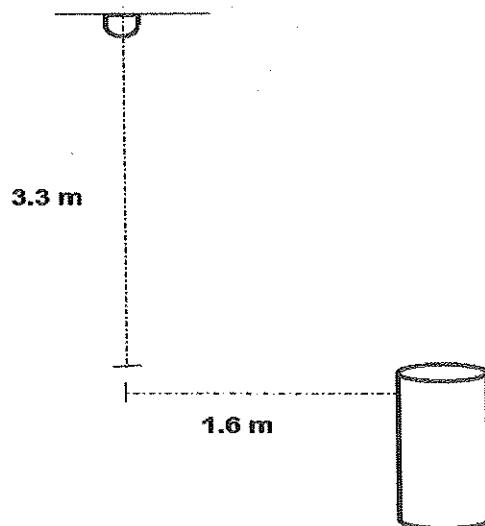

Figure QB1
Rajah QB1

QUESTION 2**SOALAN 2**CLO1
C2

- (a) Describe light output ratio (LOR).

Jelaskan nisbah keluaran cahaya (LOR).

[3 marks]

*[3 markah]*CLO1
C2

- (b) Describe with the aid of a luminaires diagram by referring to the proportion of light emission below:

Jelaskan dengan gambarajah luminaire dengan merujuk kepada arah keluaran cahaya di bawah:

- i. Direct

Terus

[3 marks]

[3 markah]

- ii. Indirect

Tidak Terus

[4 marks]

[4 markah]

CLO2
C3

- (c) A light point source with the luminous intensity given as $I = 1000 (1 + 2 \cos \theta)$ is mounted 5 metres above the work surface as shown in **Figure QB2**.

Satu sumber titik cahaya dengan keamatan lar yang diberi iaitu $I = 1000 (1 + 2 \cos \theta)$ dipasang 5 meter dari aras permukaan kerja seperti yang ditunjuk dalam Rajah QB2.

- i. Calculate the illuminance at point Ea, Eb and Ec

Kira pencahayaan di titik Eb dan Ec.

[15 marks]

[15 markah]

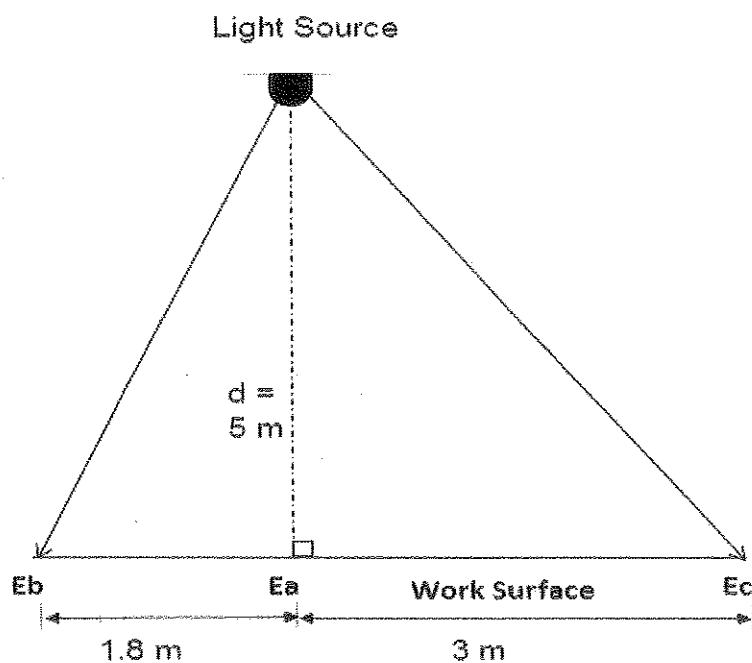

Figure QB2

Rajah QB2

QUESTION 3**SOALAN 3**CLO1
C2

- (a) Identify THREE (3) characteristics of a generator system as a main power supply system for emergency lighting.

Kenalpasti TIGA (3) ciri sistem janakuasa sebagai sistem bekalan kuasa utama untuk pencahayaan kecemasan.

[3 marks]

[3 markah]

CLO1
C2

- (b) Describe the emergency lighting power supplies below:

Jelaskan bekalan kuasa pencahayaan kecemasan di bawah:

- i. Generator

Janakuasa

[4 marks]

[4 markah]

- ii. Central battery

Bateri sepusat

[3 marks]

[3 markah]

CLO1
C3

- (c) List the locations of emergency light luminaires stated below with reference to BS 5266:

Senaraikan lokasi kedudukan sistem lampu kecemasan dibawah seperti yang dinyatakan dalam BS 5266:

- i. Mandatory point of emphasis

Penekanan pada titik mandatori

[9 marks]

[9 markah]

- ii. Additional point of emphasis
Penekanan pada titik tambahan

[6 marks]

[6 markah]

QUESTION 4

SOALAN 4

CLO1
C2

- (a) Explain the characteristics of the Metal Halide lamp by referring to its wattage range, luminous efficacy and lamp life.

Terangkan ciri-ciri lampu Halida Logam dengan merujuk kepada rangkaian watt, keberkesanan bercahaya dan hayat lampu.

[3 marks]
[3 markah]

CLO1
C2

- (b) Describe the types of emergency lighting luminaires given below:

Jelaskan jenis-jenis sistem lampu bagi lampu kecemasan tersebut:

- i. Single point luminaire

Sistem lampu titik tunggal

[3 marks]
[3 markah]

- ii. Slave luminaire

Sistem lampu Kandung diri

[2 marks]
[2 markah]

- iii. Combined luminaire

Sistem lampu digabung

[2 marks]
[2 markah]

CLO2
C3

- (c) A master bedroom measuring of 6 m x 5 m x 4 m (height) has a vertical window with a dimension of 3.5 m x 1.8 m. The reflection factor for the surface of ceiling, wall, floor and glass are 60%, 70%, 10% and 25% respectively. The glass transmission value is 65% and the angle of visible sky is 60°.

Sebuah bilik tidur utama berukuran 6 m x 5 m x 6 m (tinggi) mempunyai tingkap pugak berukuran 3.5 m x 1.8 m. Faktor pemantulan bagi permukaan siling, dinding, lantai dan kaca adalah 60%, 70%, 35% dan 25%. Manakala nilai transmisi kaca adalah 75% dan sudut langit yang kelihatan pada 60°.

- i. Calculate the average daylight factor for the room

Kira purata faktor cahaya siang bagi bilik

[10 markss]

[10 markah]

- ii. Illustrate the no-sky line if the room is blocked by an 8 metre high building located 5 metres away. Assume the window sill is 0.95 m from the floor.

Gambarkan garisan tiada langit jika bilik tersebut dihalang oleh bangunan setinggi 8 m yang terletakkan 5 m daripada bilik tersebut. Andaikan ambang tingkap 0.95 m dari lantai.

[5 marks]

[5 markah]

SOALAN TAMAT

Appendix A1
